Programming fundamentals course (CS102)

Course Project

Write a program to manage a casher in a super-market. The program should enable user to make a bill. A menu will be displayed to the user to enable him to make different operations. The user can add an item to the bill, delete an item, display a list with all the items in the bill, show the total amount of the bill, and make discount on the total amount. Add functions for each operation required (a function to add an item, a function to delete an item, and so on).

Create a structure "Item" that contains the ID, name, numOfPiece, and price of the item. Then use the item structure in the program to represent the purchased items in the bill.

Deadline : 7/5/2017
